Chapter 1

Results — 1:1 matching

1.1 Baseline tables

The following tables and numbers all extracted from the analysis dataset, the documentation for the table contents is in the R-code that reads and tabulates data.

Table 1.1: *Follow-up by baseline (index) drug for analyses of death and heart failure for 1:3 matched data.*

N: no. persons; D: death; H: heart failure; B: HF or death; PY: person-years.

The PY under ACM are all risk time before death, the PY under HF is only risk time prior to HF/death.

Index-drug	N	%	All cause mortality				Heart failure / Death					
			On drug		Off drug		On drug			Off drug		
			D	PY	D	PY	H	B	PY	H	B	PY
SGLT-2i	9227	100.0	75	8327.0	50	2596.8	66	140	8289.9	26	72	2556.9
